

MS International, Inc.
Premium Surfaces Since 1975

Porcelain & Ceramic Collection

Global Infrastructure

● Import Countries

Founded in 1975, M S International, Inc. is the leading distributor of countertop, flooring, wall-tile and hardscaping products in North America and Canada. MSI imports materials from 36 countries while maintaining purchasing offices in Brazil, China, India, and Turkey. Headquartered in Orange, California, MSI's nationwide system of 19 distribution centers is focused on efficiency, making sure the over 30,000 containers we import arrive as expected. Our top priority is providing the highest level of customer service in the industry. Our worldwide team of over 1,000 employees seeks to provide you with all the tools and information required to promote our products. Our website www.msistone.com contains the most up-to-date information on products, including pictures, room scenes, sizes available, and technical specifications.

Overview

Tile has transformed living spaces into extraordinary works of art since ancient times. Tile has been used in the most prestigious buildings floor to ceiling or for the simplest install on a bathroom floor. As the tile industry flourished, the art of using tile became a rite of passage for the prosperous. Aspiring families often attempted to emulate the intricate designs and textures in their own hand crafted design. Today, as people seek more beauty and low-maintenance surfaces in their surroundings, tile has become a go-to solution. Porcelain and ceramic products can be easily incorporated into every living and working space with various options for interiors and exteriors.

The terms “ceramic tile” and “porcelain tile” are often used interchangeably, but ceramic and porcelain tiles each have their own unique attributes and benefits. True ceramic is made of clay mixed with various minerals and water. This composition is processed with heat to create a solid product. Since ceramic material is porous, the top surface is usually sealed with a glaze, which applies the ceramic tile’s color, design and texture. Glazed ceramic tile is very durable, and it is also one of the easiest surfaces to clean. When coated in a high-quality glaze, ceramic tile is highly resistant to scratching, burning and moisture. The main ingredient in the composition of porcelain tile is finely ground sand. Unlike ceramic, processing porcelain tile involves pressure and extremely high temperature. The end result is a very dense material with a water absorption rate of less than 0.5%. The density and composition of porcelain tile allows it to be used in a variety of applications indoors and outdoors in the most extreme weather conditions. With today’s technology, design possibilities are endless. The realistic looks created in ceramic and porcelain these days offer wood looks, stone looks, and contemporary looks that that give a new meaning indestructible authentic beauty.

We are experts in special projects, sizes, colors and finishes. Order containers, pallet quantities, or cut orders through our nationwide network of distribution centers.

Porcelain - Cotto Looks

Capella

Capella Silt 24"x24"

One of the hottest new looks in the industry is inspired by an old favorite, traditional terracotta tiles. Our new Cotto tiles are a perfect blend of terracotta and concrete looks mixed together to give an updated feel to these old world styles. Lovely hues of greige and rust offer a beautiful patina to finish off these lovely tiles.

Porcelain & Ceramic - Stone Looks

Eramosa

Eramosa White 12"x24"
Eramosa Grey 12"x24"

Everyone wants the look of natural stone, but not everyone is willing to put forth the effort required to maintain a natural surface. Get all of the style with virtually none of the maintenance by using MSI's popular stone-look porcelain and ceramic tiles. We have created tiles that emulate the world's most popular stones, including travertine, slate, quartzite and onyx. Every piece has just the right amount of color, shade variation and sheen.

Porcelain - Fabric Looks

Focus

Focus Olive 12"x24"
Black/White Pebbles Mosaic

Texture and dimension are the latest trends in porcelain, beautifully personified through cross hatch markings and thin linear lines that replicate intricate fabric designs. The rectified edges compose a nearly seamless surface. Designers of fashion and interiors can't seem to get enough of mixing and harmonizing with patterns.

COF & PEI

STATIC COEFFICIENT OF FRICTION (ASTM C 1028)

- Establishes effort to move an object across the face of the tile
- Important in an attempt to minimize slip and fall injuries
- American Disability Act (ADA) requires COF not less than 0.6 for level surfaces and not less than 0.8 for ramps

DYNAMIC COEFFICIENT OF FRICTION (ANSI 137.1)

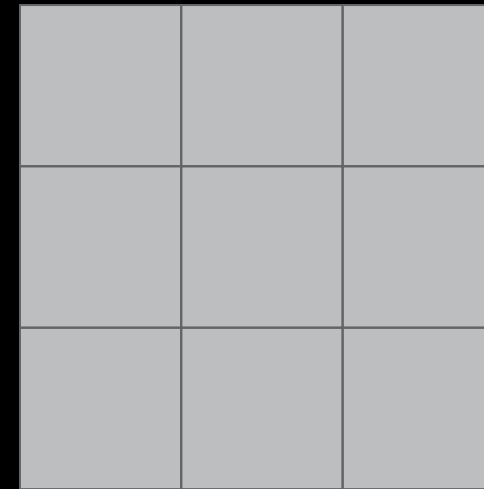

According to the ANSI A137.1 standard for ceramic tile, "Unless otherwise specified, tiles suitable for level interior spaces expected to be walked upon when wet shall have a wet DCOF of 0.42 or greater when tested using SLS solution as per the procedure in section 9.6.1. However, tiles with a DCOF of 0.42 or greater are not necessarily suitable for all projects. The specifier shall determine tiles appropriate for specific project conditions, considering by way of example, but not in limitation, type of use, traffic, expected contaminants, expected maintenance, expected wear, and manufacturers' guidelines and recommendations."

SURFACE ABRASION (ASTM C 1027)

Commonly known as PEI Rating, determines the resistance of a glazed surface in relation to traffic and wear the surface can endure without damage to its appearance.

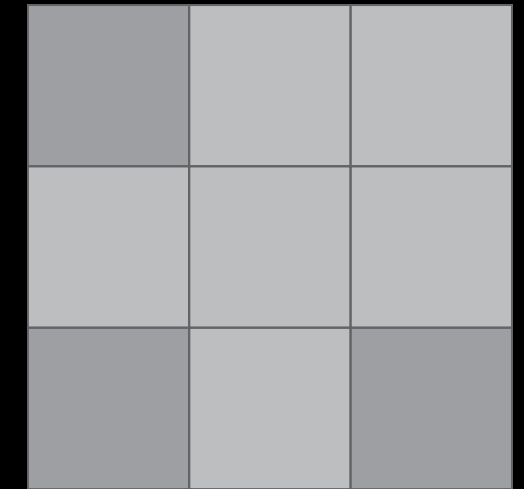

- 1** PEI 1: Light duty floor (residential bathroom or other areas with light traffic)
- 2** PEI 2: General residential traffic (not for kitchens, entrance halls, stairs or other medium traffic areas)
- 3** PEI 3: All residential and light commercial area (offices, reception areas, boutiques. Not recommended for commercial entryway)
- 4** PEI 4: Medium commercial traffic and light institutional use (restaurants, hotels, hospital lobbies and corridors)
- 5** PEI 5: Heavy traffic areas with abrasive dirt, where maximum performance is required (shopping malls, public buildings, building entrances, banks)

Shade Variation

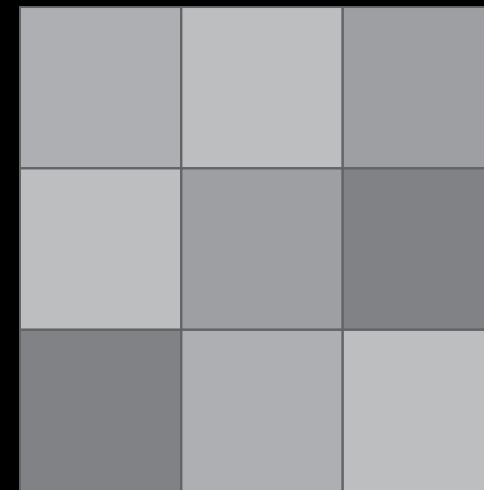

V1 = Uniform Appearance

Differences among pieces from the same production run are minimal.

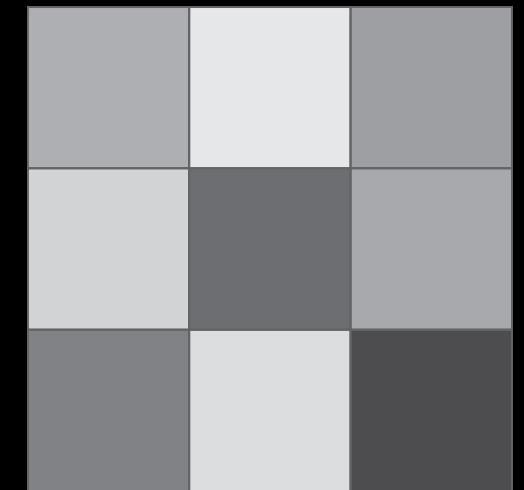

V2 = Slight Variation

Clearly distinguishable texture and/or pattern within similar colors.

V3 = Moderate Variation

While the colors present on a single piece of tile will be indicative of the colors to be expected on the other tiles, the amount of colors on each piece may vary significantly.

V4 = Substantial Variation

Random color differences from tile to tile, so that one tile may have totally different colors from those on other tiles. Thus, the final installation will be unique.

Premium Surfaces

Vendor cannot be held liable in any case of action resulting from the product use in any form. The purchaser must determine suitability and maintainability of the material for any use. Vendor makes no expressed or implied warranty of fitness for any particular purpose. Porcelain products inherently vary in shade and caliber; therefore, to ensure customer satisfaction, examine all the tiles prior to installation. We recommend selecting tile from same shade and caliber (i.e. same size and numerical shade), mixing tiles from different boxes, and rotating the tiles to avoid repetitive patterns during installation. To achieve alippage-free rectangular tile installation, it is suggested to utilize a minimum 1/8" grout joint and an offset between 15% and 30%. Porcelain tiles can be cleaned using warm water and a cloth or mop. For deeper cleaning, we recommend using a neutral cleaner or a diluted white vinegar and water solution. (Do not use abrasive cleaners or sponges or cleaning agents with strong chemicals as this may harm the material. The vendor disclaims any liabilities after installation.)
